1. Overview

This specification provides the details of the **INVOICE/CREDIT NOTE** message (INVOIC) to be used in EDI base Standard - EDIFACT format between Operating company and the vendor.

Message Type : INVOIC
 Reference directory : D.96A
 Sub-set EANCOM : 008
 Version : V2

An Invoice is a message claiming payment for goods or services supplied under agreed conditions between the seller and the buyer.

An invoice must correspond to the order. It should contain the details as sent in the order. Vendor can send partial and full invoices. System can accept multiple invoices for a single order.

Features segments or Data Element has been mentioned in detail. Segments which are not used for us, that has been removed from the details.

The operating company will generate the orders. You should use the same data from the purchase order.

ROUND OFF RULES

Amounts must always be rounded to two decimal places as below:

Online amount (calculated)	Online amount (MOA segment)
5.563	5.56
5.565	5.57
5.566	5.57

The rule for calculating VAT

VAT must be calculated in the following way at the foot of the page:

Sum of amounts net of taxes of each line by VAT rate (20.00, 7.00, 5.00 etc) multiplied by the VAT rate. Not by the sum of the VAT amounts on each line.

1. Segments Layout

The segments are presented in the sequence in which they appear in the message. The segment or segment group tag consists of Segment Name; Segment code; Status; maximum field lengths; maximum number of repeats of the segment/element and the details/descriptions to provide extra required information. There is various status of Data elements as per EANCOM standard, but for KITS messages we use only three statuses as (M)andatory / (C)onditional / (R)equired:

CODE	STATUS	USE
M	Mandatory	Code Indicator defines that the segment/element must be used.
C	Conditional	Code Indicator defines that the segment/element is optional. It can or cannot be used by the Vendors as per their own requirements.
R	Required	Code indicator defines that the segment /element is conditional as per the EDIFACT message standards, but the message information is mandatory only for the company.

Descriptions which has been flagged as NULL, means that no specific data is needed in that field. But even if information is being sent in those fields, it will be accepted if the format is correct as per standard.

Characters allowed in the file in any text field are as below:

Blank space	
Asterisk	*

Ampersand	&
Open bracket	(
Close bracket)
Comma	,
Hyphen	-
Full stop	.
Solidus	/
Percent	%

NB: Lowercase characters are permitted for general descriptors such as address, product description etc. but coded information and constants must always be in uppercase.

2. Message Structure Chart

Here collections of segments repeat as a group, which is mentioned as segment groups. **Number of Repeats** defines the number of times a segment or segment group may repeat. This structure is specific only for our company.

3. Message Segment Details

This specification contains only the segment details for the messages for our company. Other Segments (as per the GS1 EANCOM standard) which are not used in the Message has not been defined here.

All the segments details have been listed in the same sequence they appear on the message. Specific Comments has been added in the Description column to clarify the requirements.

For some of the segments, the code has been fixed (as per the EDIFACT message standard codes) . This code has been defined with a tag name as **Default Code/Value=** (data)

SEGMENT	SEGMENT NO.	SEGMENT NAME	M/C/R	PIC	DESCRIPTION	
UNA :			M			
	UNA1	+	Data element separator	M	an.1	Is used to separate two simple or composite data elements (Default value = +)
	UNA2		Decimal notation	M	an.1	Is used to indicate the character used for decimal notation (Default value = .)
	UNA3		Release character	M	an.1	Used to restore the separator and the terminator signs to their original specification (Default value= ?)
	UNA4		Reserved for future use	M	an.1	Default value = (space)
	UNA5		Segment terminator	M	an.1	Used to indicate the end of segment data (Default value = ')

Remarks:

This is a mandatory segment. It is used to envelope the interchange and identify the two trading parties.

Example:

UNB+UNOA:3+3760196190004:14+3020400000100:14+160105:1036+7593547'

SEGMENT		SEGMENT NO.	SEGMENT NAME	M/C/R	PIC	DESCRIPTION	
UNH	+	0062	Message reference Number	M	an.14	Sender's unique message reference. Sequence number of the messages in the interchange. The reference in the UNT segment should match with the reference number mentioned here.	
		S009	MESSAGE IDENTIFIER	M			
		0065	+	Message Type Identifier	M	an.6	INVOIC (Code to identify that the message is an Invoice)
		0052	:	Message type version number	M	an.3	D (UN/EDIFACT Directory)

		0051	:	Controlling agency	M	an.2	Default value= UN
		0057	:	Association assigned code	R	an.6	Default value= EAN008

Remarks:

This service segment is used to uniquely identify & specify the type of message. Segment No 0057 states that EANCOM version 008 is being used.

Example:

UNH+15+INVOIC:D:96A:UN:EAN008'

		1004	+	Document Number	R	an.35	Invoice reference number
		1225	+	Message function code number	R	an.3	Default Value= 9 (Resemble original message)

Remarks:

This segment is used to indicate the type, function, and the reference document number of the message.

BGM/1225 messages function code states as below:

9 = **Original** (Code indicating to the recipient that this Invoice is an original message).

The document reference number BGM/C002/1004 can be maximum of 16 characters.

Example:

BGM+380 +001671+9'

BGM+381+FV/0787/G+9'
